PROFILE

Frontend Developer with 8+ years of commercial experience. For the last several years I have specialized in building web applications with React, TypeScript and Next.js.

I actively use AI tools and agents to speed up development, refactoring and routine automation.

Extensive experience with SSR, SSG, ISR, state management, CI/CD, performance optimization, Storybook and unit testing. I have built projects from scratch, refactored existing applications, supported production systems and coordinated a small team.

I can break tasks down on my own, work with designers and backend developers, run code reviews and take a product through to release.

I understand that development is a tool for solving business problems. I choose an approach flexibly depending on the situation and look for the balance between development speed and the quality of the solution.

I adapt easily to new processes, pick up tools quickly and dive into the business logic of a project. I can explain complex technical decisions in plain language and work effectively with the team.

I pay particular attention to performance, quality of implementation and usability of interfaces. I do not just close a task: I try to make the product convenient and pleasant to use.

CAREER

Frontend Engineer, Dafna

2024 — Present

Redesigned and continue to support the client side of dafna.uz, including refactoring, performance work, new pages, and feature improvements. Designed and built mirislamus.github.io, developed a Telegram mini app for product suppliers, and work on the hit-proxy.net frontend.

React · TypeScript · JavaScript · Next.js · SCSS · Axios · Redux · Zustand

Frontend Engineer, Humandone

2022

Built React and Web3 websites and applications, including humandone.com, caldera.humandone.com, and crypto.humandone.com. Contributed to the Perspecta AI assistant platform and developed a personal Pomodoro timer at mirislamus.github.io/pomodoro.

React · TypeScript · Gatsby · Next.js · SCSS · Tailwind CSS · Chakra UI · Axios

Technical Lead & Frontend Engineer, Margin Digital Studio

2020

Led the technical development department while building turnkey websites as a Frontend Engineer. Created interactive quizzes and contributed to projects including age.uz and rebus.uz.

HTML · SCSS · JavaScript · Gulp · Nunjucks · PHP · WordPress

Web Engineer, One Web

2019

Built layouts and animations of varying complexity using template engines, preprocessors, and build tools. Integrated completed interfaces into WordPress.

HTML · SCSS · JavaScript · jQuery · Gulp · Nunjucks · PHP · WordPress

HTML/CSS Engineer, Web Pult

2018

Built landing pages, online stores, and other interfaces of varying complexity using preprocessors and build tools. Also completed freelance projects to broaden my practical experience.

HTML · CSS · SCSS · JavaScript · jQuery · Gulp
